

Audit Management System

The Audit Management System (AMS) gives your field personnel access to Alta360 Research's advanced data capture technologies for completing inventory checks, location reviews and other types of internal audits.

With AMS, your team uses their Android, iOS or Windows mobile device to answer audit questions and collect and submit audit data. This not only increases efficiency, it provides you with instant feedback regarding the status of your locations. And with the power of the Celestial Reporting & Analytics™ platform, you can analyze AMS data, run reports and easily track and compare results over time or between business units.

Program Features

Embedded photos and geo-tagging of audit data

Access results 24/7

Qualitative (open comments) option

Celestial Reporting & Analytics™

- Custom Reporting Options

- Action Plan Dashboard
